

GramSetu AI - Software Attribution & Third-Party Licenses

This document acknowledges the third-party open-source libraries, framework tools, fonts, icons, and machine learning models used in GramSetu AI.

1. Third-Party Libraries & Frameworks

We use the following open-source dependencies (defined in [package.json](file:///d:/GramSetu%20AI/package.json)):

Library	Purpose	License
Next.js 16	Core react framework, App Router, static exporting	MIT License
React 19	View layer execution	MIT License
TypeScript 5	Static type checking	Apache-2.0 License
Tailwind CSS 4	Styling engine and custom layout tokens	MIT License
onnxruntime-web	In-browser model execution (WASM / WebGL)	MIT License
Tesseract.js	Pure Javascript OCR engine running in Web Workers	Apache-2.0 License
jsPDF	In-browser PDF generation and binary exports	MIT License
lucide-react	SVG icon library	ISC License
clsx	Classname string construction	MIT License
tailwind-merge	Safe utility class merging	MIT License

2. Open-Source Machine Learning Models

YOLOv8-nano (Object Detection Model)

- **Developer:** Ultralytics
- **Usage:** Used in SwachhAudit for detecting litter, waste types, and sanitation issues.
- **License:** AGPL-3.0 License / Enterprise License

Tesseract OCR Models

- **Developer:** Google / Tesseract contributors
- **Usage:** Language training sets used in GramLipi for character recognition.
- **License:** Apache-2.0 License

3. Fonts & Typography

Google Fonts

- **Font Families:** *Inter* and *Outfit*
- **Usage:** Main application typography, headers, and UI panels.
- **License:** SIL Open Font License (OFL)
